

MANAGED MICROSOFT SECURITY

THE CHALLENGE

For most organisations ensuring that they are able to deal with the threat of cyber attacks is a high priority. However against the backdrop of increasing hybrid working, the adoption of cloud and with more data available for attackers to exploit, delivering effective security controls is proving challenging.

Traditional reliance on inhouse teams, and a myriad of legacy, loosely integrated point technologies is preventing the need to implement automation of detection and response capabilities, and restricts visibility of threats and vulnerabilities across the full extent of the modern workplace.

SERVICE OFFERING

Understanding how to integrate Microsoft's Security controls into your security strategy is one way of addressing these challenges. With its integrated nature and depth of offering, organisations can gain much better visibility, enabling better detection and a more co-ordinated response capability.

With Computacenter, you can benefit from access to skills to deploy and configure Microsoft security, in life management and maintenance of the Microsoft security platform and operation of core Endpoint security services.

MASTER MICROSOFT SECURITY

Platform Management

Policy & rule configuration, 2nd and 3rd line support, fault management, maintenance and updates.

Tenant Administration

Administration and management of M365 security configuration.

Advanced Management

Administration and configuration of the security products within M365.

Enabling Security Outcomes

Enable generated data and event logs to be consumed by customer SIEM tooling.

Service Reporting

Reporting on security posture of M365 tenant, feature update advice and guidance and Service deck enablement.

Endpoint Security Services

Disk Encryption, Client Firewall, Endpoint Privileged Management, Patch Management, Pattern-Based AV services, device hardening, App Control & Isolation and Security reporting.

OUR APPROACH

The Microsoft security consultants at Computacenter provide a end to end service that enables you to bring Microsoft Security into your broader security eco-system, integrating with existing vendor technologies to create a more complete solution that offers better visibility and control, automation and cost reduction.

Computacenter will help you understand what Microsoft solutions are available, how and when to deployment, how to integrate with existing solutions and will guide and assist with implementation. Once deployed we will provide in-life support and management of the Microsoft security platform, whilst delivering comprehensive endpoint security services.

We deliver managed Microsoft Security as part of our broader Managed Workplace services, an end to end modular offering enabling us to tailor our solution to meet your specific needs.

With Computacenter you can benefit from the integrated nature of the Microsoft security solution whilst retaining the best of your existing technologies, all delivered as part of a comprehensive Managed Workplace service.

OPTIMISATION AND CONSOLIDATION

The use of differing workplace security solution vendors can create blind spots and make control more of a challenge.

Consider bringing Microsoft Security to the core of your Endpoint Security strategy to remove blind spots and give improved visibility and control. Consolidate existing investments in security products and platforms, and integrate critical retained security vendors with Microsoft to protect existing investments whilst leveraging Microsoft's integrated nature to deliver more automation and insight.

BENEFITS

Reduce the need to manage multiple security vendors

Reduced procurement & renewals

Remove security blind spots

Reduce complexity & simplify operations

Increase your purchasing power
